

INTERNAL QA DOCUMENT

SevaSaathi

QA Testing Checklist

Comprehensive manual testing checklist covering all platform features -- authentication, dashboards, real-time services, and API endpoints. For project owner verification prior to production release.

Prepared for Nishu (Project Owner)

Document type Internal QA Checklist

Version 1.0

Scope All features except payment gateway

Table of Contents

Chapter 1: Landing Page & Public Features	3
Chapter 2: Authentication System	4
2.1 Email Registration	4
2.2 Email Login	5
2.3 Google OAuth	5
2.4 Phone OTP Verification	6
2.5 Password Management	6
Chapter 3: Family Member Dashboard	7
3.1 Patient Management	7
3.2 Caregiver Search & Smart Matching	8
3.3 Booking Management	9
3.4 Care Reports	9
3.5 Reviews	10
3.6 Complaints	10
3.7 Notifications	10
Chapter 4: Caregiver Dashboard	11
4.1 Profile Setup	11
4.2 Document Verification	11
4.3 Booking Management	12
4.4 Care Reports	12
4.5 Earnings & Withdrawals	13
4.6 Reviews	13
Chapter 5: Admin Dashboard	13
5.1 Overview Analytics	14
5.2 User Management	15

5.3 Verification Management	16
5.4 Booking Management	16
5.5 Withdrawal Management	17
5.6 Review & Complaint Management	17
Chapter 6: Real-Time Features (Socket.io)	17
Chapter 7: Email Service	18
Chapter 8: SMS Service	19
Chapter 9: API Health Check	19

Chapter 1: Landing Page & Public Features

Pass	#	Test Step	Expected Result
[]	1	Open the landing page URL in a browser	Page loads within 3 seconds; HTTP 200 response; no console errors
[]	2	Visually verify all sections are present on the page	All 10+ sections visible: Hero, How It Works, Features, Smart Matching, Trust & Safety, Pricing, Testimonials, Footer, etc.
[]	3	Click each navigation link: How It Works, Features, Smart Matching, Trust & Safety, Pricing, Testimonials	Page smoothly scrolls to the corresponding section; section heading is visible in the viewport
[]	4	Click the Login button in the navigation bar	Redirected to the login page (/login)
[]	5	Click the Get Started button	Redirected to the registration page (/register)
[]	6	Resize browser to 375px width (mobile) and verify layout	All sections display correctly without horizontal overflow; navigation collapses to hamburger menu if applicable; text is readable
[]	7	Resize browser to 768px width (tablet) and verify layout	Two-column layouts adapt appropriately; images and cards resize without overflow
[]	8	Resize browser to 1440px width (desktop) and verify layout	Full desktop layout with maximum content width; adequate side margins on large screens
[]	9	Check browser DevTools for PWA manifest and icon files	manifest.json loads successfully; icon-192.png returns HTTP 200; icon-512.png returns HTTP 200

Pass	#	Test Step	Expected Result
[]	10	Scroll to the footer and verify all links and content	Footer is visible with all links (Privacy Policy, Terms, Contact, etc.); social media links are present and functional

Chapter 2: Authentication System

2.1 Email Registration

Pass	#	Test Step	Expected Result
[]	1	Navigate to /register and select Family Member role; fill all fields (name, email, phone, password) and submit	Account created successfully; user redirected to OTP verification page; success message displayed
[]	2	Navigate to /register and select Caregiver role; fill all fields and submit	Account created successfully; user redirected to OTP verification page
[]	3	Attempt registration with an email that already exists in the database	Error message displayed: email already registered; form does not submit
[]	4	Submit registration with password shorter than minimum length (e.g., 4 characters)	Validation error: password too short; form does not submit
[]	5	Submit registration with an invalid phone number format	Validation error: invalid phone number; form does not submit
[]	6	After successful registration, check the EmailLog table or backend console for OTP email	EmailLog table contains a new row with the registered email; email body contains a 6-digit OTP
[]	7	Enter the correct OTP on the verification page and submit	OTP verified; user redirected to the appropriate dashboard based on role; emailVerified flag set to true

2.2 Email Login

Pass	#	Test Step	Expected Result
[]	1	Navigate to /login; enter valid email and password; submit	User authenticated; redirected to the role-appropriate dashboard; session cookie is set
[]	2	Enter valid email with incorrect password; submit	Error message displayed: invalid credentials; user stays on login page
[]	3	Enter an email that is not registered; submit	Error message displayed: user not found; user stays on login page
[]	4	After successful login, refresh the page (F5)	User remains logged in; session persists; dashboard loads without re-authentication

2.3 Google OAuth

Pass	#	Test Step	Expected Result
[]	1	Navigate to /login and verify the Google OAuth button is visible	Google sign-in button rendered on the login page with correct branding/icon
[]	2	Click the Google OAuth button	Browser redirects to Google consent screen; correct client ID and redirect URI are used
[]	3	Complete Google authentication (select or create account)	User redirected back to the application; user record created (if new) or updated (if existing); session cookie set
[]	4	After OAuth redirect, verify session state	User is logged in; correct user data (name, email, avatar) populated; dashboard accessible

2.4 Phone OTP Verification

Pass	#	Test Step	Expected Result
[]	1	Trigger phone OTP send from the verification endpoint; check response body in dev mode	Response includes devOtp field in development mode; HTTP 200 returned
[]	2	Enter the correct 6-digit OTP and submit	Phone verified successfully; phoneVerified flag set to true in user record
[]	3	Enter an incorrect 6-digit OTP and submit	Error message displayed: invalid OTP; phoneVerified flag remains false
[]	4	Wait 5 minutes after OTP is generated, then submit the same OTP	Error message displayed: OTP expired; user can request a new OTP
[]	5	After successful phone verification, check the user record in the database	phoneVerified field is true; updated timestamp reflects the verification time

2.5 Password Management

Pass	#	Test Step	Expected Result
[]	1	Navigate to Change Password; enter current password, new password, confirm new password; submit	Password changed successfully; user can log in with the new password
[]	2	Enter incorrect current password in the Change Password form	Error message displayed: current password is incorrect; password not changed
[]	3	Navigate to Forgot Password; enter registered email to trigger OTP	OTP email sent to the registered address; EmailLog records the email
[]	4	Enter correct OTP, then set a new password	Password reset successfully; user can log in with the new password; old password no longer works

Chapter 3: Family Member Dashboard

3.1 Patient Management

Pass	#	Test Step	Expected Result
[]	1	Navigate to Patient Management; click Add Patient; fill all fields (name, age, condition, care needs, etc.) and submit	Patient profile created; appears in patient list with correct details
[]	2	Navigate to Patient List and verify all patients display	Patient list shows all created patients with name, age, and condition summary
[]	3	Click on a patient from the list to view details	Patient detail page shows all fields: name, age, medical conditions, care requirements, assigned caregivers
[]	4	Click Edit on a patient profile; modify one or more fields; save	Patient profile updated; changes reflected on the detail page and list view

3.2 Caregiver Search & Smart Matching

Pass	#	Test Step	Expected Result
[]	1	Navigate to Caregiver Search; enter a city name and search	Results show only caregivers whose city matches the search term
[]	2	Apply filter by skill (e.g., "Elderly Care")	Results narrow to caregivers who have the specified skill in their profile
[]	3	Apply filter by verification status (verified/unverified)	Results update to show only caregivers matching the selected verification status
[]	4	Apply filter by minimum rating (e.g., 4 stars)	Results show only caregivers with average rating $\geq$ the specified value
[]	5	Navigate to Smart Matching; select care requirements (condition type, shift preference, etc.) and run matching	Results display caregivers with weighted match scores; scores reflect how well caregivers match the requirements
[]	6	Click on a caregiver from search or matching results to view their full profile	Caregiver detail page shows: name, photo, skills, experience, ratings, reviews, availability, hourly rate, verification badges

3.3 Booking Management

Pass	#	Test Step	Expected Result
[]	1	Navigate to Create Booking; select a patient, caregiver, shift type (day/night), start/end dates, and times; submit	Booking created with status "pending"; all details saved correctly in the database
[]	2	Verify the cost calculation on a new booking (hourly rate x hours per shift x number of days + 10% platform fee)	Total cost matches the formula: (hourly_rate x hours x days) x 1.10; displayed cost is correct
[]	3	Navigate to Booking List; use status filters (pending, confirmed, in-progress, completed, cancelled)	List updates to show only bookings matching the selected filter; filter toggle works correctly
[]	4	Click on a booking to view its detail page	Detail page shows: patient info, caregiver info, payment summary, linked care reports, and reviews
[]	5	Select a pending/confirmed booking and click Cancel; enter a cancellation reason; submit	Booking status changes to "cancelled"; cancellation reason is recorded; caregiver is notified
[]	6	Create an urgent care request and verify the 25% surcharge	Urgent booking created with total cost = standard cost x 1.25; urgent flag is visible on booking detail

3.4 Care Reports

Pass	#	Test Step	Expected Result
[]	1	Navigate to a confirmed/in-progress/completed booking and open the Care Reports section	List of care reports submitted for this booking is displayed, sorted by date (newest first)
[]	2	Click on a care report to view its details	Report shows: date, activities performed, patient mood, food intake, medicines given, any concerns flagged

3.5 Reviews

Pass	#	Test Step	Expected Result
[]	1	Navigate to a completed booking and open the Review section; submit a review with ratings for all 4 dimensions (overall, communication, punctuality, care quality) and optional comment	Review submitted successfully; all 4 ratings and comment are saved
[]	2	Navigate to the reviewed caregiver profile	The new review appears on the caregiver profile with correct ratings and comment; average rating updates

3.6 Complaints

Pass	#	Test Step	Expected Result
[]	1	Navigate to Complaints section; click File Complaint; fill subject, description, and priority; submit	Complaint created with status "open"; confirmation message displayed
[]	2	View the complaints list and check status updates	Each complaint shows current status (open, in-progress, resolved); status history/timeline is visible

3.7 Notifications

Pass	#	Test Step	Expected Result
[]	1	Verify the notification bell icon in the header shows an unread count badge	Bell icon displays a numeric badge when there are unread notifications; badge count matches actual unread count
[]	2	Click the bell icon to open the notification dropdown/list	Notification list appears showing all notifications with timestamps, read/unread state, and brief descriptions
[]	3	View a notification; verify it is automatically marked as read	Opened notification status changes to read; unread count badge decreases by 1; bell badge updates

Chapter 4: Caregiver Dashboard

4.1 Profile Setup

Pass	#	Test Step	Expected Result
[]	1	Navigate to Profile Setup; fill all fields (city, gender, address, experience years, skills, bio, hourly rate); submit	Profile saved successfully; all fields reflect the entered values on the profile page
[]	2	Navigate to Availability; set day shift and night shift availability for each day of the week; save	Weekly availability schedule saved; correct shift types displayed for each day; available time slots match settings

4.2 Document Verification

Pass	#	Test Step	Expected Result
[]	1	Navigate to Document Upload; select a document type (e.g., Aadhaar, PAN); upload a valid file; submit	Document uploaded successfully; appears in document list with type, file name, and status "pending"
[]	2	Upload an Aadhaar card image and verify AI OCR extraction	System extracts name, date of birth, Aadhaar number from the image; extracted data is displayed for review before submission
[]	3	Check the verification status of an uploaded document	Document shows correct status: pending, approved, or rejected; rejection reason visible if rejected

4.3 Booking Management

Pass	#	Test Step	Expected Result
[]	1	Navigate to My Bookings; view the list of assigned bookings	All bookings assigned to this caregiver are listed with status, patient name, dates, and shift type
[]	2	Select a pending booking and click Confirm	Booking status changes to "confirmed"; family member receives a notification
[]	3	Select a confirmed booking and click Mark In-Progress	Booking status changes to "in-progress"; care report submission becomes available
[]	4	Select an in-progress booking and click Mark Completed	Booking status changes to "completed"; family member is notified; review submission becomes available

4.4 Care Reports

Pass	#	Test Step	Expected Result
[]	1	For an in-progress booking, navigate to Submit Care Report; fill all fields (activities, mood, food, medicines, concerns); submit	Care report created successfully; report appears in the booking care reports section
[]	2	After submitting a care report, check the family member notification	Family member receives a real-time notification (Socket.io) about the new care report
[]	3	After submitting a care report, check the EmailLog table for notification email	EmailLog contains a new entry for the family member; email content includes care report summary with highlighted concerns

4.5 Earnings & Withdrawals

Pass	#	Test Step	Expected Result
[]	1	Navigate to Earnings section and view earnings history	Earnings page shows a list of all completed booking payments with date, amount, and booking reference
[]	2	Navigate to Withdrawals; enter amount and select withdrawal method (UPI or bank transfer); submit	Withdrawal request created with status "pending"; available balance decreases by the requested amount
[]	3	Verify the balance calculation: available = 90% of total earnings minus pending withdrawal amounts	Displayed available balance matches: $(total_earned \times 0.90) - sum(pending_withdrawals)$; calculation is accurate

4.6 Reviews

Pass	#	Test Step	Expected Result
[]	1	Navigate to My Reviews; view the list of received reviews	All reviews from family members are displayed with ratings (overall, communication, punctuality, care quality), comments, and dates

Chapter 5: Admin Dashboard

5.1 Overview Analytics

Pass	#	Test Step	Expected Result
[]	1	Navigate to Admin Dashboard; verify all stat cards display correctly	Cards show: total users, total bookings, total revenue, average rating, open complaints; all values are non-negative numbers
[]	2	Verify the Bookings by Status chart renders	Chart displays with correct segments for each booking status (pending, confirmed, in-progress, completed, cancelled); legend is readable
[]	3	Verify the Complaints by Status chart renders	Chart displays with correct segments for complaint statuses; data matches database counts
[]	4	Verify the Caregivers by City chart renders	Chart displays caregiver distribution across cities; city names are readable; counts are accurate

5.2 User Management

Pass	#	Test Step	Expected Result
[]	1	Navigate to User Management; search by name	Results show users whose name contains the search term; results are accurate
[]	2	Search users by email	Results show the user matching the email exactly; partial email search works if implemented
[]	3	Search users by phone number	Results show the user matching the phone number
[]	4	Apply role filter (Family, Caregiver, Admin)	User list updates to show only users with the selected role
[]	5	Click on a user to view detailed profile	User detail page shows: name, email, phone, role, registration date, verification status, associated patients/bookings
[]	6	Delete a test user (non-critical account) and verify cascade delete	User removed from database; associated records (patients, bookings for test user) are also removed or handled gracefully

5.3 Verification Management

Pass	#	Test Step	Expected Result
[]	1	Navigate to Verification Management; view the list of verification documents with filters	List shows all uploaded documents with caregiver name, document type, upload date, and status
[]	2	Apply filters (document type, status, caregiver name)	List updates correctly based on applied filters; combined filters work together
[]	3	Select a pending document and click Approve	Document status changes to "approved"; caregiver is notified
[]	4	Select a pending document and click Reject; enter a rejection reason; submit	Document status changes to "rejected"; rejection reason is recorded and visible; caregiver is notified
[]	5	Approve all required documents for a caregiver and verify auto-promotion	When all document types are approved, caregiver verification status automatically changes to "verified"

5.4 Booking Management

Pass	#	Test Step	Expected Result
[]	1	Navigate to Admin Booking Management; view all platform bookings	List displays all bookings across the platform with patient name, caregiver name, dates, status, and amount
[]	2	Search bookings by patient name or caregiver name	Results show bookings matching the search term

5.5 Withdrawal Management

Pass	#	Test Step	Expected Result
[]	1	Navigate to Withdrawal Management; view all withdrawal requests	List shows all withdrawal requests with caregiver name, amount, method (UPI/bank), date, and status
[]	2	Select a pending withdrawal and process it through the status workflow (pending -> processing -> completed)	Status updates correctly at each step; caregiver notified upon completion
[]	3	Select a pending withdrawal and click Reject; enter a reason	Status changes to "rejected"; reason is recorded; caregiver balance is restored

5.6 Review & Complaint Management

Pass	#	Test Step	Expected Result
[]	1	Navigate to Review Management; view all reviews across the platform	List shows all reviews with reviewer name, caregiver name, ratings, date, and comment
[]	2	Navigate to Complaint Management; view all complaints	List shows all complaints with complainant, subject, priority, status, and date
[]	3	Select a complaint; assign it to an admin or caregiver; update status to in-progress	Complaint assigned correctly; status changes; assigned user receives notification
[]	4	Resolve a complaint and add resolution notes	Complaint status changes to "resolved"; resolution notes are saved and visible in the complaint timeline

Chapter 6: Real-Time Features (Socket.io)

Pass	#	Test Step	Expected Result
[]	1	Verify the Socket.io service is running on port 3005	Service responds to connection requests on port 3005; no errors in server logs
[]	2	Trigger a payment status update as an admin; verify the family member receives a real-time notification	Family member browser receives a Socket.io event with payment update details; UI updates without page refresh
[]	3	Trigger a booking status change (e.g., confirm); verify the caregiver receives a real-time notification	Caregiver browser receives a Socket.io event with booking update details; UI updates without page refresh
[]	4	Submit a care report as a caregiver; verify the family member receives a real-time notification	Family member browser receives a Socket.io event for the new care report; notification appears instantly
[]	5	Disconnect the browser from the network and reconnect; verify Socket.io reconnects automatically	After reconnecting, the Socket.io connection is re-established; no missed events during disconnect; connection state recovers

Chapter 7: Email Service

Pass	#	Test Step	Expected Result
[]	1	Trigger OTP email by initiating registration or password reset	Email is sent via Gmail SMTP; email arrives in the recipient inbox (or spam); contains the correct 6-digit OTP
[]	2	Create a new booking and verify the booking confirmation email	Email sent to family member with booking details: patient name, caregiver name, dates, shift, total cost
[]	3	Submit a care report with concerns flagged; verify the care report notification email	Email sent to family member with care report summary; flagged concerns are highlighted or prominently displayed in the email body

Pass	#	Test Step	Expected Result
[]	4	After sending any email, check the EmailLog table in the database	EmailLog table contains a new row with: recipient email, subject, email type/status, timestamp; all fields are populated

Chapter 8: SMS Service

Pass	#	Test Step	Expected Result
[]	1	Trigger phone OTP send via the API endpoint	In production: SMS sent via Fast2SMS to the phone number; in dev mode: devOtp returned in the API response body
[]	2	In development mode, verify the devOtp is returned in the response	API response JSON includes a devOtp field with the 6-digit OTP; no actual SMS is sent in dev mode
[]	3	After OTP send, verify the OTP is stored in the database	Database contains the OTP record with: phone number, OTP code, expiration timestamp, used flag (initially false)

Chapter 9: API Health Check

Pass	#	Test Step	Expected Result
[]	1	Send GET/POST requests to all auth endpoints (/auth/register, /auth/login, /auth/google, /auth/otp-send, /auth/otp-verify)	All endpoints return appropriate HTTP status codes (200, 201, 400, 401); response bodies match API schema
[]	2	Send GET/POST/PUT requests to all booking endpoints (/bookings, /bookings/:id, /bookings/cancel, /bookings/urgent)	All endpoints respond correctly; CRUD operations work as expected; status transitions are enforced

Pass	#	Test Step	Expected Result
[]	3	Send GET/PUT requests to all caregiver endpoints (/caregivers, /caregivers/:id, /caregivers/profile, /caregivers/availability)	All endpoints respond with correct data; profile updates persist; availability schedules save correctly
[]	4	Send GET requests to all admin endpoints (/admin/users, /admin/verifications, /admin/bookings, /admin/withdrawals, /admin/reviews, /admin/complaints)	All endpoints respond correctly for admin users; non-admin users receive 401 or 403 Forbidden
[]	5	Send requests with invalid inputs (missing fields, wrong data types, invalid IDs)	Endpoints return HTTP 400 with descriptive error messages; no server crashes or 500 errors
[]	6	Send requests without authentication to protected endpoints	Endpoints return HTTP 401 Unauthorized; no data is leaked in the response body
